Remote Control Receiver IC **PT2225**

DESCRIPTION

PT2225 is a remote control receiver utilizing the high performance CMOS Technology specially designed for use on various infrared remote control applications. It can be paired with PT2221/2 or NEC's µpD6121/2 to construct a very powerful remote control system. Housed in an 18-pin SO Package, PT2225 is capable of controlling a maximum of 64 functions and supports two custom code options.
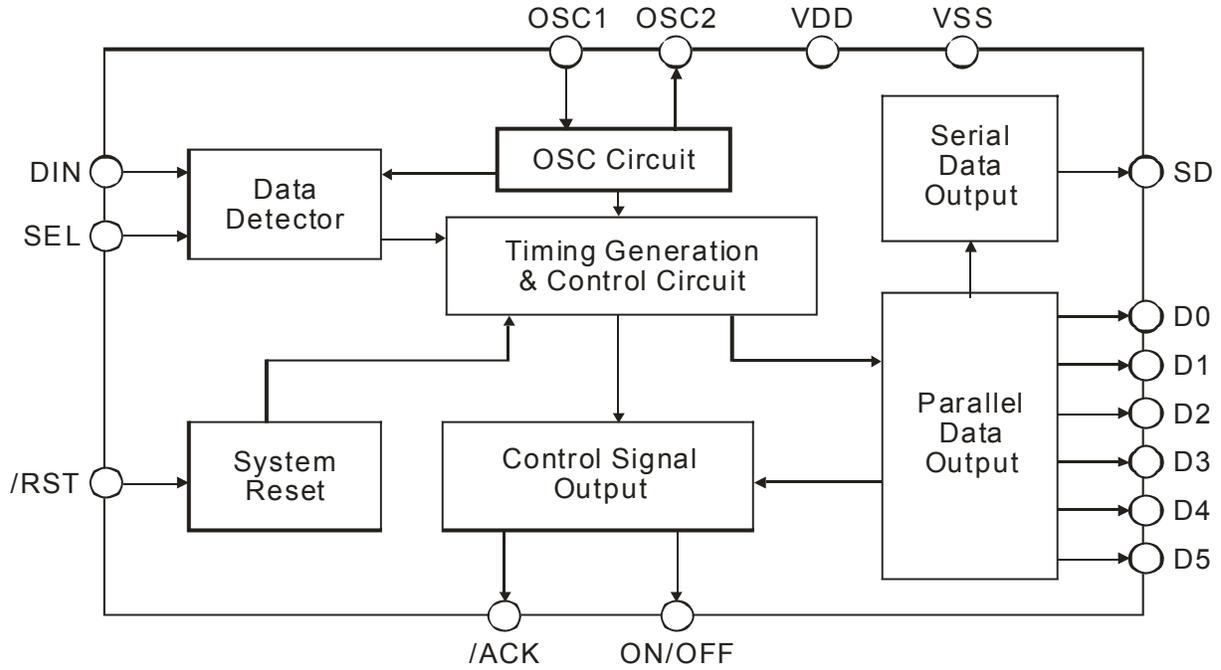

FEATURES

- CMOS Technology
- Low Power Consumption
- Very High Noise Immunity
- Code Detection Circuit Prevents Interference from Various Types of Machines and Apparatus.
- Two Custom Codes Available (FC08 and 866B)
- Serial and Parallel Outputs Available. (Serial Output may be used on RS-232, 9600 Baud Rate)
- Maximum of 64 Function Keys

APPLICATIONS

- Cable TV Tuner
- Video Cassette Recorder
- Electrical Home Appliance
- Multi-Media Personal Computer System
- CD-ROM
- MPEG
- Presentation Software

PIN CONFIGURATION

```
        SEL   1        18   SD
        DIN   2        17   VSS
        VSS   3        16   OSC1
       /RST   4        15   OSC2
        VSS   5        14   VDD
         D0   6        13   ON/OFF
         D1   7        12   /ACK
         D2   8        11   D5
         D3   9        10   D4
                 PT2225
```

PIN DESCRIPTION

Pin Name	I/O	Description	Pin No.
SEL	I	Customer Code Selector	1
DIN	I	Remote Signal Input	2
VSS	-	Negative Power Supply	3, 5, 17
/RST	I	Reset Pin When this pin is set to "L" Level, PT2225 is initialized.	4
D0~D5	O	Parallel Data Output Pin	6~11
/ACK	O	Acknowledge Signal	12
ON/OFF	O	Power Signal	13
VDD	-	Positive Power Supply	14
OSC2	O	Oscillator Output Pin	15
OSC1	I	Oscillator Input Pin	16
SD	O	Serial Data Output Pin	18

Remote Control Receiver IC   **PT2225**

FUNCTION DESCRIPTION

PT2225 can receive signals transmitted by PT2221/2 (Transmitter) via the PT2225's Remote Signal Input Pin (DIN). This PT2221/2 transmission signal consists of a Leader Code, Custom Code and Data Code. The inverse code of the custom and data codes are also sent simultaneously; thereby, allowing extremely low error rate in the system configuration. Please refer to the diagram below: (For more information, see PT2221/2 Product Specification.)

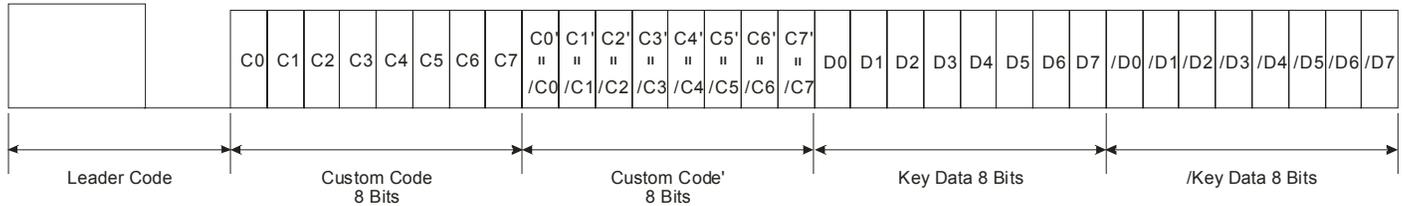

Figure 1. PT2221 Transmission Code Format

LEADER CODE

The Leader Code consist of a 9ms carrier waveform followed by a 4.5ms OFF waveform. It is used as to signal data transmission. Please refer to the Figure 1.

CUSTOM CODE

8 bits of Custom Code together with their 8 bits inversed custom codes are sent simultaneously by PT2221/2 to PT2225. Please refer to the Figure 1.
PTC provides 2 standard custom codes options as well as Customers can specify their own custom code definitions.

DATA CODE

8 bits of data codes together with their 8 bits inversed data codes are sent simultaneously by PT2221/2 to PT2225. Please refer to the Figure 1.

Remote Control Receiver IC   **PT2225**

PT2225 OUTPUT PINS

PARALLEL DATA OUTPUT PINS: D0~D5

Output Pins - D0~D5 are parallel data output pins. When PT2225 receives a valid transmission, D0~D5 will send Parallel Latch Data Output. This data is sustained until another data is inputted or entered.

SERIAL DATA OUTPUT PIN: SD

SD is a serial data output pin. When PT2225 receives valid transmission, it will send out Serial Momentary Data Output. This data is not sustained until the next data code is inputted. This means that when there is no data input, there is no SD output. The serial data format follows the standard RS-232 (9600 Baud Rate). SD signal does not contain any parity check bit, instead it includes 1 start bit, 6 data bits and 2 stop bits. Please refer to the figure below.
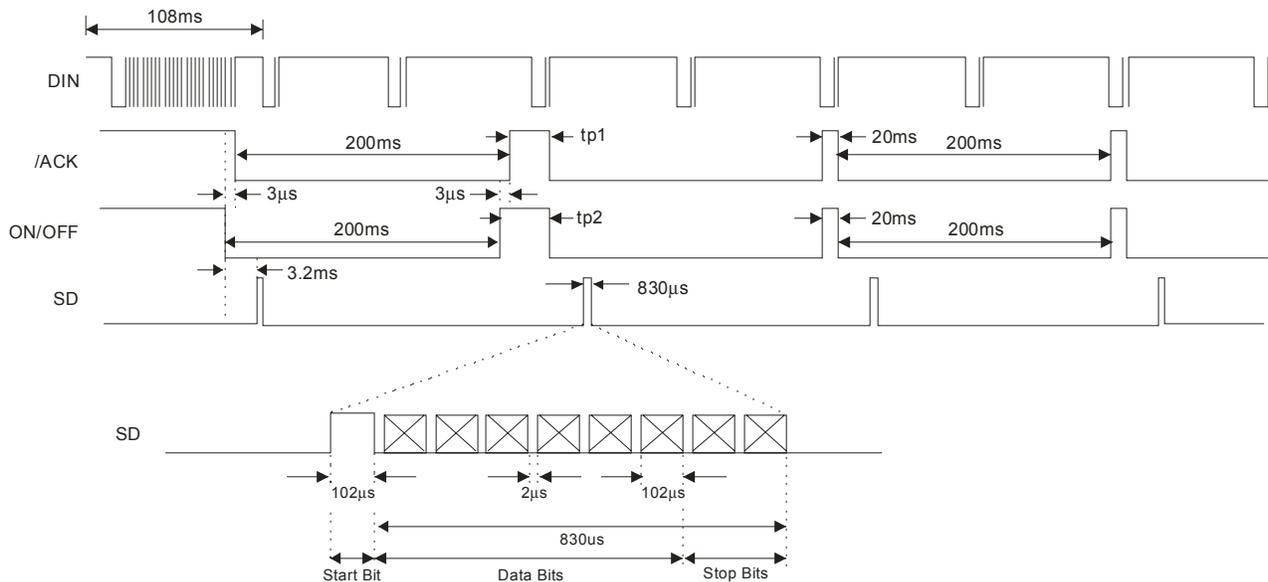

Figure 2. PT2225 Waveforms (Transmitter Key is Continuously Pressed)

ACKNOWLEDGE PIN: /ACK

/ACK is the Acknowledge Signal Pin. When PT2225 receives continuous valid transmission, then /ACK waveform is repetitively generated. The /ACK Waveform goes on a Low State for 200ms. This 200ms Low Pulse is then followed by a 20ms High Pulse. When PT2225 stops receiving the transmission, /ACK then goes HIGH. Please refer to the diagram below.

Figure 3. /ACK Waveforms

Remote Control Receiver IC **PT2225**
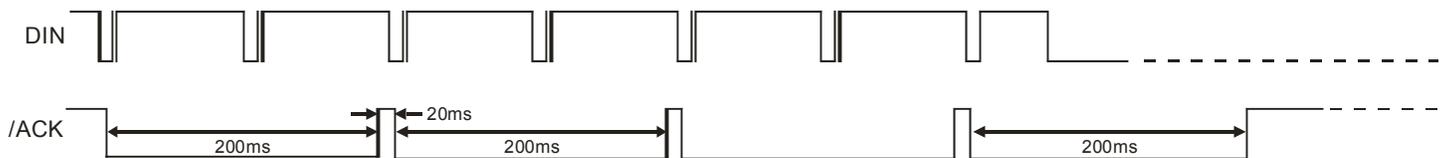

POWER SIGNAL PIN ON/OFF:

PT2225 receives signals with 12H data codes from PT2221/2 at the DIN Pin. This 12H data code (D0~D7) = 0100,1000. When PT2225 continuously receives this signal, then the ON/OFF waveform is repetitively generated. The ON/OFF waveform consists of a 20ms high pulse generated after a 200ms low pulse. When PT2225 stops receiving the signal, ON/OFF Pin goes to HIGH. Refer to the diagram below:
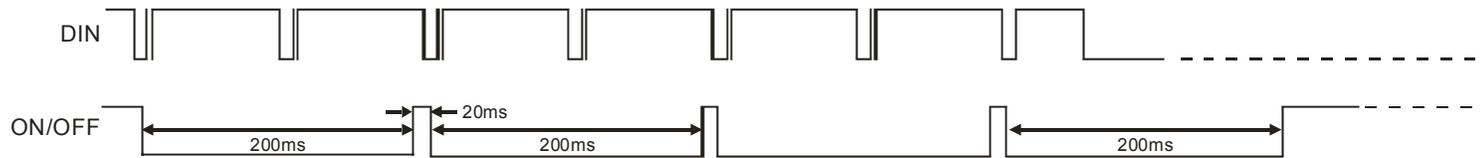

Figure 4. ON/OFF Waveforms

Notes:
1. Dimensioning and tolerancing per ANSI Y14.5-1982.
2. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold Flash protrusion or gate burrs shall not exceed 0.15mm (0.006 in) per side.
3. Dimension "E" does not include interlead flash or protrusions. Interlead flash or protrusions shall not exceed 0.25mm (0.010 in) per side.
4. The chamfer on the body is optional. It is not present, a visual index feature must be located within the crosshatched area.
5. "L" is the length of the terminal for soldering to substrate.
6. "N" is the number of terminal positions. (N=18)
7. The lead width "B" as measured 0.36mm (0.014 in) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.24 in)
8. Controlling dimension: MILLIMETER.
9. Refer to JEDEC MS-013 Variation AB.
