SERIAL INTERRUPT MODE SELECTION PORT 1	
IRQ	E3
Normal	Pins 1 & 3, 2 & 4 closed
Shared Interrupt mode without resistor	Pins 3 & 5, 4 & 6 closed
Shared Interrupt mode with resistor	Pins 3 & 5, 4 & 6, 8 & 10 closed
None	Open

Note: When using the shared interrupt mode, either port 1 or port 2 must include a 1K ohm pull-down resistor. This is done by either closing pins 7 & 9 or pins 8 & 10 on E3. If there is more than one Datashark in use, or if you wish to completely remove the pull-down resistor for hardware compatibility, set E3 in shared interrupt mode and do not include the pull-down resistor. This will prevent the ports from triggering an interrupt.
