

DT-985 PCI Internal Light Pen Interface

Model: DT-985

The High Quality Touchscreen Alternative

The DT985™ internal light pen interface sets new standards for the light pen industry. Fast, accurate and precise, the DT985™ is designed to industrial standards, yet is equally at home in office and clean room applications. The DT985™ offers high performance, combining super speed with a proprietary algorithm that centers the pen tip on a single pixel. The light pen will work with all of your software applications, adding a higher level of interactivity to your performance. The rugged, virtually maintenance-free light pen gives you direct, one-to-one cursor interaction that eliminates the repetitive motions associated with mice. Simply touch the screen on your standard monitor and the cursor snaps into place. No special screens or monitors are necessary. This low cost solution offers a natural, precise and fun way to maximize cursor control and enhance interactivity.

- Plug And Play®
- Includes drivers for Windows® 95/98, NT 4.0, 2000, & ME
- Easy to install
- Super-fast for accurate, jitter-free performance and precise cursor control
- Pixel Point Accuracy
