Contents

Introduction

Depending on the configuration chosen, some of the hardware components described may not be available on your system board.

You will find further information in the "BIOS Setup" description.

Further information about drivers is provided in the readme files on the hard disk, on the supplied drivers diskettes, on the "Drivers & Utilities" or on the "ServerStart" CD.

Notational conventions

The meanings of the symbols and fonts used in this manual are as follows:

Pay particular attention to text marked with this symbol. Failure to observe this warning endangers your life, destroys the device, or may lead to loss of data.

Supplementary information, remarks, and tips follow this symbol.

► Text which follows this symbol describes activities that must be performed in the order shown.

␣ This symbol indicates that you must enter a blank space (press the Space Bar) at this point.

↵ This symbol indicates that you must press the Enter key.

`Text in this typeface` indicates screen outputs.

`Text in this bold typeface` indicates the entries you make via the keyboard.

Text in italics indicates commands or menu items.

"Quotation marks" indicate names of chapters or terms.

Important notes

Store this manual close to the device. If you pass the device on to third parties, you should pass this manual on with it.

Be sure to read this page carefully and note the information before you open the device.

You cannot access the system board components without first opening the device. How to dismantle and reassemble the device is described in the Operating Manual accompanying the device.

Please observe the safety information provided in the "Important notes" chapter in the device's operating manual.

Incorrect replacement of the lithium battery may lead to a risk of explosion. It is therefore essential to observe the instructions in the "Add-on modules" - "Replacing the lithium battery" section.

The shipped version of this board complies with the requirements of the EEC directive 89/336/EEC "Electromagnetic compatibility".

Compliance was tested in a typical PC configuration.

When installing the board, refer to the specific installation information in the Operating Manual or Technical Manual for the receiving device.

Connecting cables for peripherals must be adequately shielded to avoid interference.

Components can become very hot during operation. Ensure you do not touch components when making extensions to the system board. There is a danger of burns!

The warranty is invalidated if the device is damaged during the installation or replacement of system expansions. Information on which system expansions you can use is available from your sales outlet or the customer service centre.

Information about boards

To prevent damage to the system board or the components and conductors on it, please take great care when you insert or remove boards. Take great care to ensure that extension boards are slotted in straight, without damaging components or conductors on the system board, or any other components, for example EMI spring contacts.

Be especially careful with the locking mechanisms (catches, centring pins etc.) when you replace the system board or components on it, for example memory modules or processors.

Never use sharp objects (screwdrivers) for leverage.

Boards with electrostatic sensitive devices (ESD) are identifiable by the label shown.

When you handle boards fitted with ESDs, you must, under all circumstances, observe the following points:

- You must always discharge static build up (e.g. by touching a grounded object) before working.
- The equipment and tools you use must be free of static charges.
- Remove the power plug from the mains supply before inserting or removing boards containing ESDs.
- Always hold boards with ESDs by their edges.
- Never touch pins or conductors on boards fitted with ESDs.

Features

The components and connectors marked are not necessarily present on the system board.

- System board in ATX format
- AMD Duron or Athlon processor with 200 or 266 MHz Front Side Bus.

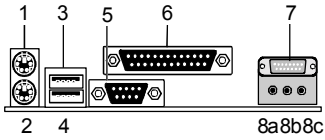
The size and frequency of first-level cache and second-level cache are dependent upon the processor used.

VIA Apollo KT266A

- Analogue Devices AD1885 (AC'97) Audio Codec
  internal: Stereo CD-In, Stereo AUX-In
  external: Mono Micro-In, Stereo Line-In, Stereo Line-Out
- Game/Midi port
- 3 DIMM slots for up to 3 GB main memory (DDR-DRAM memory modules meet the PC1600/PC2100 specification) without ECC
- Flash BIOS
- Power-on functions:
  - Wake on RTC
  - Wake on LAN
  - Wake on PCI Cards
  - Wake on USB
- Energy saving functions:
  - APM and ACPI (requires an operating system that supports ACPI)
  - Switching on/off, standby mode, suspend mode via on/off switch
  - Switching on/off via software
- Security functions:
  - Chipcard reader interface (SmartCard reader)
  - Cover monitoring: cover monitoring reports when the cover has been opened without authorisation.
  - System, Setup and Keyboard password
  - parallel and serial ports can be deactivated
  - Floppy disk write-protection
  - Boot hard disk virus warning function
  - Flash BIOS and EEPROMs (on the memory modules) virus protection function.

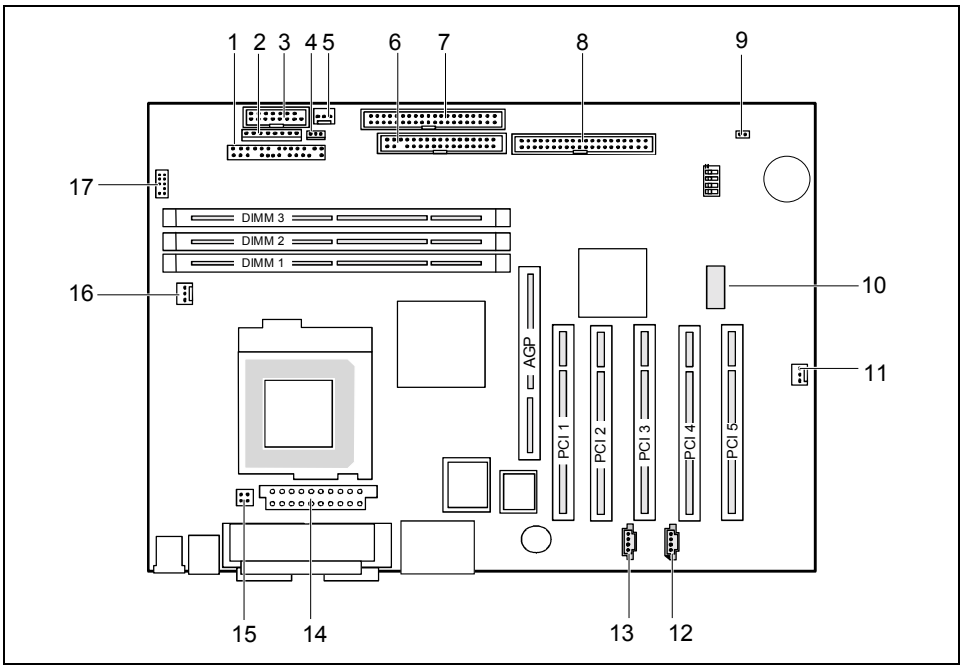
- 5 PCI slots
  PCI slots support 3.3 V main and auxiliary voltages.
- 1 AGP slot
  The AGP slot supports 1x, 2x and 4x AGP mode. The voltage is detected and configured automatically.
- IDE hard disk controller connected to PCI bus for up to four IDE drives
  (e.g. IDE hard disk drives, ATAPI CD-ROM drives)
  The IDE hard disk controller are ATA33/66/100, ultra DMA capable and support PIO modes 0-4.
- Floppy disk drive controller (possible formats: 720 KB, 1.44 MB, 2.88 MB)
- The system board supports booting from a 120 MB IDE floppy disk drive.
- 1 external parallel port (ECP- and EPP-compatible)
- 1 external serial port (16C550 compatible with FIFO)
- 1 internal chipcard reader interface (SmartCard reader). This port does not support Wake-On-Ring.
  This interface can also be used as a second serial port (16C550 compatible with FIFO).
- 1 internal WOL interface
- 2 external PS/2 ports for keyboard and mouse
- 2 external USB ports
- USB ports C, D, E (internal)
- Real-time clock/calendar with integrated battery backup

Interfaces and connectors



1 = PS/2 mouse port
2 = PS/2 keyboard port
3 = USB port 1
4 = USB port 2
5 = Serial port 1
6 = Parallel port
7 = Game/Midi port
8a = Audio Line-Out
8b = Audio Line-In
8c = Audio Micro-In

The components and connectors marked are not necessarily present on the system board.



1 = Connector for control panel and loudspeaker
2 = Power supply monitoring
3 = Chipcard reader interface or serial port 2
4 = Cover monitoring
5 = Fan 2 (e.g. for the processor)
6 = Floppy Disk Drive
7 = IDE drives 3 and 4 (secondary)
8 = IDE drives 1 and 2 (primary)
9 = FSB jumper
10 = USB port C, D
11 = Wake On LAN
12 = CD audio input
13 = AUX audio input
14 = Power supply
15 = Additional power supply
16 = Fan 1 (e.g. for the processor)
17 = USB port E

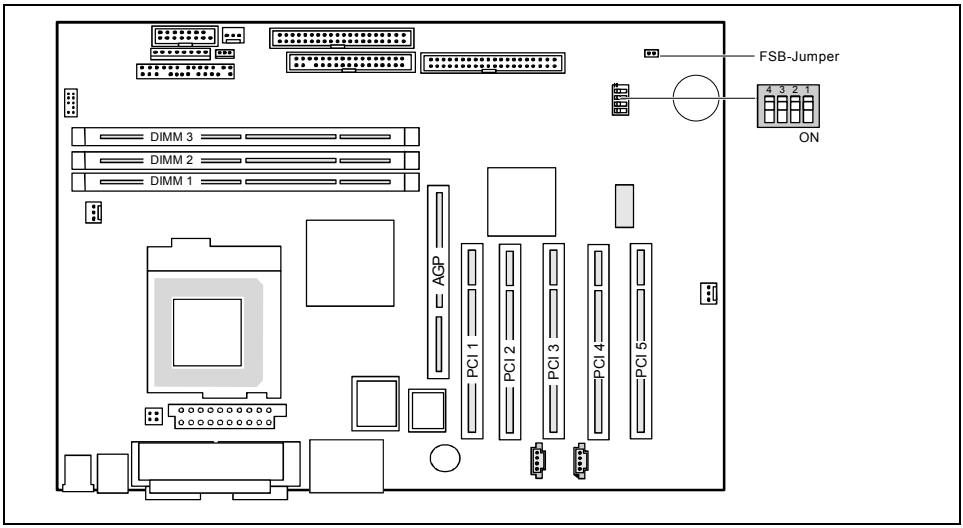
The components and connectors marked are not necessarily present on the system board.

Hard disk connection

An ultra ATA/66 or ultra ATA/100 hard disk must be connected with a cable especially designed for the ultra ATA/66or ultra ATA/100 mode.

► Connect the end of the cable marked with blue to the system board.

Settings with switches and jumpers



Switch 1 = must always be set to *off*
Switch 2 = System BIOS recovery
Switch 3 = Write-protection for floppy disk
Switch 4 = must always be set to *off*

FSB jumper inserted: 266 MHz
FSB jumper not inserted: 200 MHz

Recovering System BIOS - switch 2

Switch 2 enables recovery of the old system BIOS after an attempt to update has failed. To restore the old system BIOS you need a Flash BIOS Diskette (please call our customer service centre).

On The System BIOS executes from floppy drive A: and the inserted "Flash-BIOS-Diskette" restores the System BIOS on the system board.

Off Normal operation (default setting).

Write protection for floppy disks - switch 3

Switch 3 is used to define whether floppy disks can be written or deleted in the floppy disk drive. To write and delete floppy disks, the write-protection in *BIOS Setup* must be disabled (in menu *Security*, the field *Diskette Write* must be set to *Enabled*).

On The floppy disk drive is write-protected.

Off Floppy disks can be read, written and deleted (default setting).

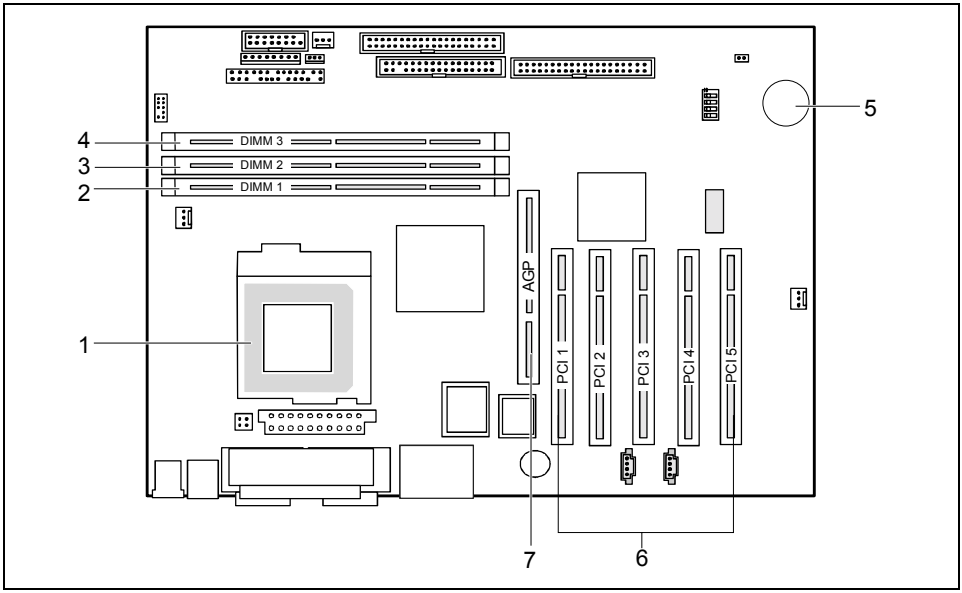
FSB jumper - Front Side Bus

The jumper sets the frequency of the Front Side Bus.

inserted	266 MHz
not inserted	200 MHz

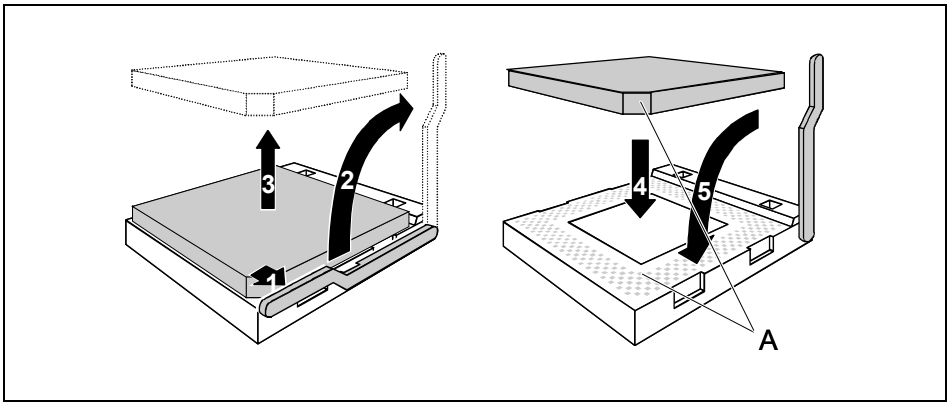
Add-on modules

Exit Suspend mode, switch off the device and remove the power plug from the mains supply, before carrying out any of the procedures described in this chapter!
Even when you have switched off the device, parts (e.g. memory modules, AGP and PCI extension boards) are still supplied with power.
All AGP and PCI slots support 3.3 V main and auxiliary voltages.



1 = Socket for processor with heat sink
2 = Location bank 1 for main memory
3 = Location bank 2 for main memory
4 = Location bank 3 for main memory
5 = Lithium battery
6 = PCI slots 1, 2, 3, 4, 5
7 = AGP slot

Installing and removing processors



- ► Pull the lever in the direction of the arrow (1) and lift it as far as it will go (2).
- ► Remove the old processor from the socket (3).
- ► Insert the new processor in the socket so that the angled corner of the processor matches the coding on the socket (A) with regard to the position (4).

The angled corner of the processor may be covered by the heat sink. In this case let yourself be guided by the marking in the rows of pins on the underside of the processor.

- ► Push the lever back down until it clicks into place (5).

Don't install a processor without heat sink.

Upgrading main memory

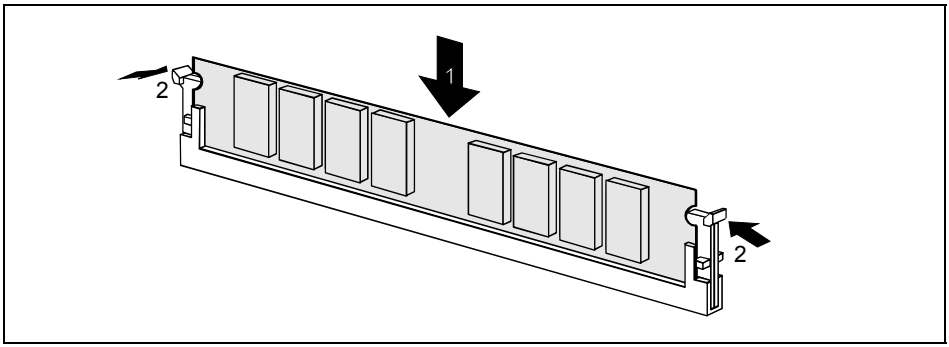
These slots are suitable for DIMM format 64, 128, 256, 512 MB and 1 GB DDR-DRAM memory modules.

Memory modules with different memory capacities can be combined.

You may only use unbuffered 2.5V memory modules. Buffered memory modules are not supported.

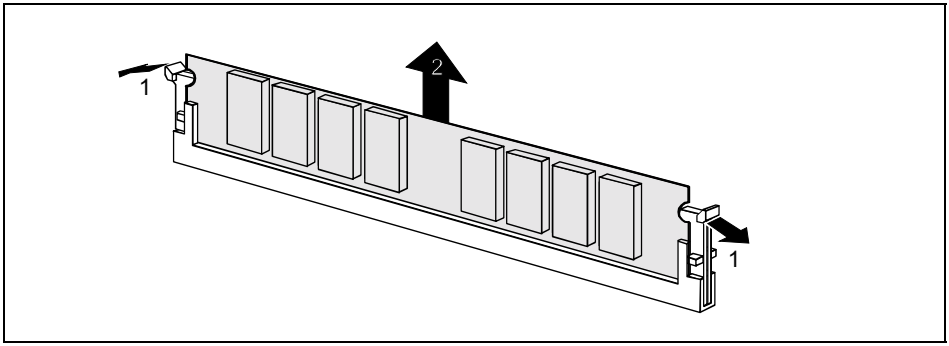
DDR-DRAM memory modules must meet the PC1600/PC2100 specification.

Installing a memory module



- ► Push the holders on each side of the memory compartment outwards.
- ► Insert the memory module into the location (1), ensuring that it is in the correct orientation.
- ► At the same time flip the lateral holders upwards until the memory module snaps in place (2).

Removing a memory module



- ► Push the clips on the right and left of the compartment outward (1).
- ► Carefully remove the memory module from the compartment (2).

Installing network board with WOL

- ► Install the network board as described in the operating manual for your unit.
- ► Push the WOL cable onto the WOL plug connector of the system board.

i

To use the WOL functionality of a network board the power supply must provide a 5 V auxiliary voltage of at least 1 A. If the system board was not already incorporated in a device when you bought it you must check whether your power supply can provide the auxiliary voltage.

You may find further information in the supplied description of the network board.

Replacing the lithium battery

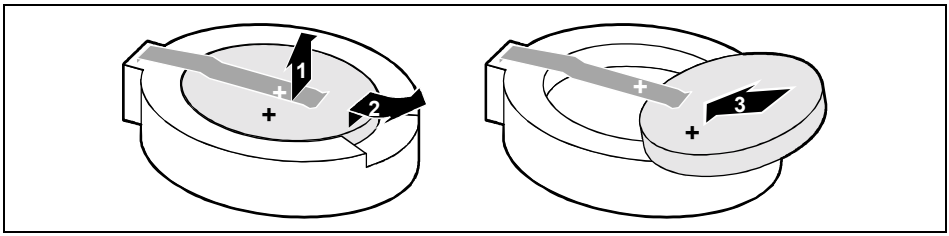
Incorrect replacement of the lithium battery may lead to a risk of explosion.

The lithium battery must be replaced with an identical battery or a battery type recommended by the manufacturer (CR2032).

Do not throw lithium batteries into the household waste. They must be disposed of in accordance with local regulations concerning special waste.

Ensure that you insert the battery the right way round. The plus pole must be on the top!

The following graphic representation is also valid if the lithium battery is built-in vertically.



- ► Lift the contact (1) a few millimetres and remove the battery from its socket (2).
- ► Insert a new lithium battery of the same type into the socket (3).

Glossary

The technical terms and abbreviations given below represent only a selection of the full list of common technical terms and abbreviations.
Not all technical terms and abbreviations listed here are valid for the described system board.

ACPI	Advanced Configuration and Power Management Interface
AC'97	Audio Codec '97
AGP	Accelerated Graphics Port
AMR	Audio Modem Riser
AOL	Alert On LAN
APM	Advanced Power Management
ATA	Advanced Technology Attachment
BIOS	Basic Input Output System
CAN	Controller Area Network
CPU	Central Processing Unit
CNR	Communication Network Riser
C-RIMM	Continuity Rambus Inline Memory Module
DDR	Double Data Rate
DIMM	Dual Inline Memory Module
DRAM	Dynamic Random Access Memory
ECC	Error Correcting Code
EEPROM	Electrical Erasable Programmable Read Only Memory
FDC	Floppy Disk Controller
FIFO	First-In First-Out
FSB	Front Side Bus
FWH	Firmware Hub
GMCH	Graphics and Memory Controller Hub
GPA	Graphics Performance Accelerator
I^2C	Inter Integrated Circuit
IAPC	Instantly Available Power Managed Desktop PC Design
ICH	I/O Controller Hub
IDE	Intelligent Drive Electronics

IPSEC	Internet Protocol Security
ISA	Industrial Standard Architecture
LAN	Local Area Network
LSA	LAN Desk Service Agent
MCH	Memory Controller Hub
MMX	MultiMedia eXtension
NIC	Networking Interface Card
P64H	PCI64 Hub
PCI	Peripheral Component Interconnect
PXE	Preboot eXecution Environment
RAM	Random Access Memory
RAMDAC	Random Access Memory Digital Analogue Converter
RDRAM	Rambus Dynamic Random Access Memory
RIMM	Rambus Inline Memory Module
RTC	Real Time Clock
SB	Soundblaster
SDRAM	Synchronous Dynamic Random Access Memory
SGRAM	Synchronous Graphic Random Access Memory
SIMD	Streaming Mode Instruction (**S**ingle **I**nstruction **M**ultiple **D**ata)
SMBus	System Management Bus
SVGA	Super Video Graphic Adapter
USB	Universal Serial Bus
VGA	Video Graphic Adapter
WOL	Wake On LAN
