ABOUT THE BABY-AT MOTHERBOARD

Specification

* 6. or 12 MHz 80286 selectable by keyboard or by hardware switch
* 4 mega byte high-speed memory standard
* 16 mega byte expandable in the protected virtual address mode
* 2 sockets for PHOENIX or AWARD or ERSO or AMI BIOS fully compatible with IBM BIOS.
* 8 I/O expansion slots
* Socket for 80287 numeric processor
* CMOS clock and calender circuit
* Battery on-board and easily serviceable for replacement
* 6 custom chips set used to reduce total ICs
* EMS control circuit
* 24-bit addressing and 16-bit data pathing capabilities
* 16-level interrupt
* 7-channel direct memory access (DMA)
* 3-programmable timers
* Speaker/keyboard connector
* Standard AT power supply connector
* Small AT dimensions
* High temperature burned-in
* 0-wait-state or 1-wait-state selectable.

QUICK INSTALLING GUIDE

Peripherals Required:

1) BABY-AT   4 Mega Byte system board.
2) IBM AT power supply or compatible equivalent
3) IBM monochrome/graphic display board or color card or EGA card or compatible equivalent.
4) IBM keyboard or compatible equivalent.
5) Monochrome or color monitor or EGA Monitor.

Pracdures:

1) Connect power supply connectors to P8 as marked.
2) Plug in keyboard connector to the keyboard receptical (J22) at the back.
3) Install monochrome or color graphic display board in expansion slot 1 or 7.
4) Select monochrome or color at switch (SW1)

Bit1-2	Bit2-3	TYPE
ON	OFF	MGP
OFF	ON	color

5) Connect monitor cable to the display board.
6) Make sure "LOW BYTE" or "EVEN BYTE" BIOS is ON IC23.
7) Make sure "HIGH BYTE" or "ODD BYTE" BIOS is ON IC33.
8) Set the RAM size as follows by DIP Switch DSP1: #6—8.

#6	#7	#8	MODE	SIZE
ON	ON	ON	0	512KB
ON	ON	OFF	1	640KB
ON	OFF	ON	2	640KB + 384KB
ON	OFF	OFF	3	640KB + EMS (384KB)
OFF	ON	ON	4	640KB + 1408KB
OFF	ON	OFF	5	640KB + EMS (1048KB)
OFF	OFF	ON	6	640KB + 3456KB
OFF	OFF	OFF	7	640KB + EMS (3456KB)

9) On Board 3.6V 60mA Back-up battery.

10) For those which have the IBM PC/AT^{TM} chasis or compatible equivalent, plug in the speaker connector to SP, and the Key Lock and Power LED connector to J20 at the front.

11) Turn on the monitor.

12) Turn on the power supply.

HOW TO SET UP AN EVALUATION MOTHERBOARD

A. BIOS ROM

1. BIOS ROM (Lo) is inserted into IC22.
2. BIOS ROM (Hi) is inserted into IC23.
3. When 27128 type is used, DSP1 switch -5 is set to ON.
4. When 27256 type is used, DSP1 switch -5 is set to OFF.

B. KEYBOARD BIOS

1. 8742 with keyboard BIOS programmed in it is inserted into 8742-marked location.
2.

JUMPER	SETTING	FUNCTION DESCRIPTION
JP1	ON (JP2, JP , JP OFF)	8742 PIN #32 OUTPUT
JP2	ON (JP1, JP3, JP4 OFF)	8742 PIN #27 OUTPUT
JP3	ON (JP1, JP2, JP4 OFF)	8742 PIN #23 OUTPUT
JP4	ON (JP1, JP2, JP3 OFF)	8742 PIN #30 OUTPUT

C. DRAM

1. A total of 8 (0-7) modes are available, depending on memory sizes, for insertion of DRAMs. A figure below shows ways of the DRAM insertion. When 4164 or 41256 DRAM is used, either DRAM is inserted to the 16-pin side. When 411000 DRAM is used, it is inserted to the 18-pin side.

4164/41256-10   411000-10
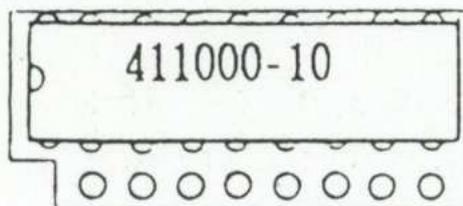

2. For base RAM setting, J18 is set to 2-3 side.
3. Mode 0

A total of 18 DRAMs (41256-10) are inserted onto BANK 0. The DSP1 switches -6, -7, and -8 are each set to ON. In this instance, the memory location is 00000 – 7FFFFH and the memory size is 512KB.

4. Mode 1

A total of 18 DRAMs (41256-10) are inserted onto BANK 0, and a total of 18 DRAMs (4164-10) are inserted onto BANK 1. The DSP1 switches -6, -7, and -8 are set to ON, ON, OFF, respectively. In this instance, the memory location is 00000 – 9FFFFH, and the memory size is 640KB.

5. Mode 2

A total of 18 DRAMs (41256-10) are inserted onto BANK 0, and a total of 18 DRAMs (41256-10) are inserted onto BANK 1. The DSP1 switches -6, -7, and -8 are set to ON, OFF, ON, respectivery. In this instance, the memory locations are 00000 – 9FFFFH, 100000H – 15FFFFH, and memory size is 640KB + 384KB.

6. Mode 3

A total of 18 DRAMs (41256-10) are inserted onto BANK 0, and a total of 18 DRAMs (41256-10) are inserted onto BANK 1. The DSP1 switches -6, -7, and -8 are set to ON, OFF, OFF respectively. In this instance, the memory location is 00000 – 9FFFFH, and the memory size is 640KB + EMS (384KB). The EMS (384KB) memory can be used as an EXPAND memory with a capacity of 16KB x 24 pages, by using a SUNTAC EMS driver program.

7. Mode 4

A total of 18 DRAMs (411000-10) are inserted onto

BANK 0. The DSP1 switches -6, -7, and -8 are set to OFF, ON, ON, respectively. In this instance, the memory locations are 00000 – 9FFFFH, 100000H – 25FFFFH, and the memory size is 640KB + 1,408KB.

8. Mode 5

A total of 18 DRAMs (411000-10) are inserted onto BANK 0. The DSP1 switches -6, -7, and -8 are set to OFF, ON, OFF, respectively. In this instance, the memory location is 00000 – 9FFFFH, and the memory size is 640KB + EMS (1,408KB). The EMS (1,4808KB) memory can be used as an EXPAND memory with a capacity of 16KB x 88 pages, by using a SUNTAC EMS driver program.

9. Mode 6

A total of 18 DRAMs (411000-10) are inserted onto BANK 0, and a total of 18 DRAMs (411000-10) are inserted onto BANK 1. The DSP1 switches -6, -7, and -8 are set to OFF, OFF, ON, respectively. In this instance, the memory locations are 00000 – 9FFFFH, 100000H – 45FFFFH and the memory size is 640KB + 3,456KB.

10. Mode 7

A total of 18 DRAMs (411000-10) are inserted onto BANK 0, and a total of 18 DRAMs (411000-10) are inserted onto BANK 1. The DSP1 switches -6, -7, and -8 are set to OFF, OFF, OFF, respectively. In this instance, the memory location is 00000 – 9FFFFH, and the memory size is 640KB + EMS (3,456KB). The EMS (3,456KB) memory can be used as an EXPAND memory with a capacity of 16KB x 216 pages, by using a SUNTAC EMS driver program.

D. MONITOR TYPE

1. When a color monitor is used, the DSP1 #2 ON.
2. When a monochrome monitor is used, DSP1 #2 OFF
   1-2 side.

E. CLOCK SPEED SWITCHING

1. When fixing to High Speed:

   TUBSET (JP9) is set to 2-3 side, and DSP 1switch-1 is set to OFF.

2. When fixing to Low Speed:

   TUBSET (JP9) is set to 2-3 side, and DSP 1switch-1 is set to ON.

3. When switching speeds externally:

   TUBSET (JP9) is set to 1-2 side, and a mechanical switch is installed onto TUB. (JP7)

   TUB (JP7) in state of OPEN provides LOW Speed, and TUB (JP7) in state of CLOSE provides High Speed.

   When TUB (JP7) is OPEN, the clock speed can be switched by use of the keyboard.

   A. ☐   CNTL + ALT + –   – Change speed
   B. ☐   CNTL + ALT + +   – Turn to High speed
          CNTL + ALT + –   – Turn to Low speed
   C. ☐   CNTL + ALT + H   – Turn to High speed
          CNTL + ALT + L   – Turn to Low speed

   When TUB (JP7) is OPEN and then power is turned on, it will turn to Low Speed.

   When TUB (JP7) is CLOSE and power is turned on, it will in-validate the keyboard operation and will turn to High Speed at all times.

F. I/O WAIT SELECTION

AUTOSWITCHABLE 6 WAIT is selected when the external clock speed is switched to High Speed; 4 WAIT is selected when it is switched to Low Speed.

G. EMS PORT ADDRESS

1. When using 0E8H— 0EFH as EMS Port Address, DSP1 switch -4 is set to ON. SUNTAC EMS driver program setting is used at this point.
2. When using 098H- 09FH as EMS Port Address, DSP1 switch -4 is set to OFF SUNTAC EMS driver program setting is used at this point.

I. RESET SWITCH

A mechanical switch is installed onto JP6. When JP6 is OPEN, the CPU will run, and when JP6 is CLOSE, the CPU will be reset.

J. MAIN MEMORY 0 WAIT MODE

A following additional circuit needs to be installed when main memories are used at 0 WAIT mode:

1. An additional circuit to be needed for 0 WAIT when DRAM is in state of READ or WRITE:
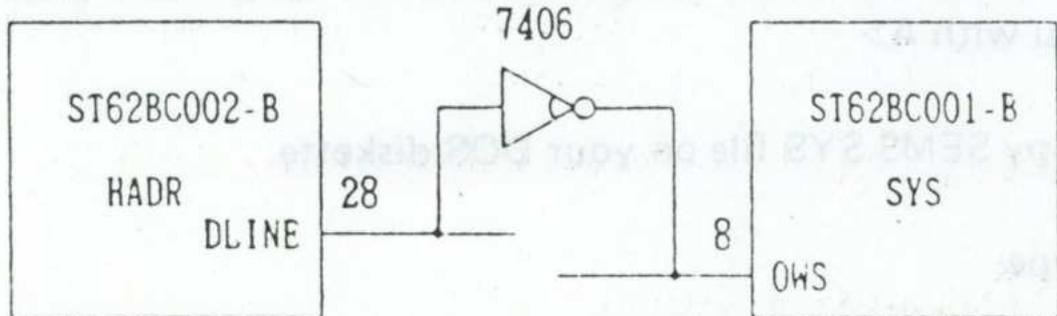

2. An additional circuit to be needed for 0 WAIT when DRAM is in state of READ:

3. An additional circuit to be needed for 0 WAIT when DRAM is in state of READ or WRITE and when PROM is in state of READ:

EMS DRIVER SET-UP

1. Boot PC system by using DOS and the system will prompt you with A>

2. Copy SEMS.SYS file on your DOS diskette.

3. Type:

    ```
    COPY CON CONFIG.SYS<ENTER>
    DEVICE=SEMS.SYS /M:xxx /P:xxxx /I:xxx<ENTER>
    ^Z<ENTER>
    ```

    where M:xxx   : System memory size, defult is 640KB.
          P:xxxx : EMS Phygical page segment address, defult automatic.
          I:xxx   : EMS Port address, defult E8H or 98H.

    The screen will display as follows:

    ```
              1 File(s) copied
        A>
    ```

4. Reboot your system. The screen will be display as follows:

    ```
    ...........................................
      SUNTAC-62 Chip Set EMS Driver Rev. 1.00
        (C)Copyright SUN ELECTRONICS CORP. 1987
    ...........................................
    EMS DRIVER INSTALL TOTAL PAGES: xxxx
    EMS PAGE SEGMENT  xxxxH
    EMS PORT ADDRESS  xxxxH
    A
    ```

5. You can run the RAMBANK software like VD.SYS, PB.COM, RAMTEST. example:
   When 384K has been set as virtual disk, then type in command line in:

   ```
   COPY CON CONFIG.SYS<ENTER>
   DEVICE=SEMS.SYS<ENTER>
   DEVICE=VD.SYS /384/<ENTER>
   ^Z<ENTER>
   ```

(1) THE EMS softuare supports SEMS, SEMS4, SEMS5.

(2) IF you have VGA & ARCHET in your system, you prodadly need to set DEVICE=SEMS5, SYS/P:CC00/.

CONNECTOR PINOUT

1. POWER SUPPLY CONNECTOR (P8)

PIN	DESCRIPTION
1	POWER GOOD
2	+ 5V DC
3	+12V DC
4	-12V DC
5	GROUND

4	KEYBOARD INHIBITOR
5	GROUND

4. KEYBOARD CONNECTOR (J22)

PIN	DESCRIPTION
1	KEYBOARD CLOCK
2	KEYBOARD DATA
3	SPARE
4	KEYBOARD GROUND
5	+ 5V DC

5. RESET CONNECTOR (JP6)

PIN	DESCRIPTION
1	RESET IN
2	GROUND

6. HIGH SPEED LED CONNECTOR (TUBLED) (JP9)

PIN	DESCRIPTION
1	+ ANODE
2	- CATHODE

NOTES: 1. XTAL SET 24 MHz = LED ON
2. XTAL SET 12MHz = LED OFF

INSTRUCTION FOR EMS DRIVER PREPARATION

1. After power is turned on, and before DRAM begins refreshing, an initial value needs to be written in EMS Register R0 (This writing to be done within BIOS ROM).

   Initial values
   (1) Write 9DH when I/O port address is E8H.
   (2) Write 93H when I/O port address is 98H.

2. When data has been written in EMS Registers R0-R7, Bit 7 in R0 has to be read as a way to confirm if the Register contents have been transferred from DADR to HADA.

   (1) When Bit 7 in R0 is 1, it means that the transfer has yet to be achieved.
   (2) When Bit 7 in R0 is 0, it means that the transfer has been achieved.

3. The system memory size in EMS Register shall not be set at any value larger than 640KB (A0H).

4. The segment start address in EMS Register R3 shall not be set at any value smaller than the system memory size (R2).

5. When setting the page Nos. of banks 0-3 in EMS Registers R4-R7, these Nos. shall correspond to these page Nos. counted, by 16KB unit, from the DRAM address 0000 0000H.

Example

When EMS has a system memory size of 640KB and the usable page head is to be set: $640 \div 16 = 40$ (28H) Therefore, 28H is set as the page head.

Incidentally, a physical page can be released by setting its corresponding bank at 0.

6. The banks 0-3 in EMS Registers R4-R7 are always in crrespondence to physical pages 0-3.

7. When the system memory size is 1MB (as shown in the Memory Address Setting 3 in an attached Table), the setting of EMS page No. at 40H will result in production of an image from the memory's 0000 : 0000H.

8. EMS maximum page Nos. are 216 pages at 4MB. The memory size that can be used with DOS is 640KB.

MEMORY ADDRESS

DRAM

NO	DIP Switch setting			Memory type		Memory size	Memory Location
	S6	S7	S8	BANK1	BANK0		
0	ON	ON	ON	NONE	256Kbits	512KB	0~7FFFF
